This conference is part of the project *Visibilité, invisibilité des savoirs des femmes*, an interdisciplinary and multilingual (French, English, Spanish) research project aiming at exploring the visibility—invisibility dialectics which informs women’s knowledge, whether in singular or collective, material or immaterial representations, from the early stages of humanism to our digital age. This project is based on a collaboration with the AWARE collective (Archives for Women Artists Research and Exhibition), the Université Paris-Est Marne-la-Vallée, and the project *VisiAtrices* (Visibilité des femmes de lettres dans l’enseignement secondaire et supérieur - <https://visiatrices.hypotheses.org>). The full program can be found at <https://femmesavoir.hypotheses.org>.
